Image credit: TechRadar Sometimes you want to do two things on your phone at the same time, and that's why it's important to know how to use split-screen for Android. Split-screen mode lets you view two apps side-by-side on your screen, so you can watch videos while working, or check your emails as you're checking Twitter. It's a useful way of using your Android phone to its fullest - but can be a little fiddly to set up if you don't know about it. To help you easily set up split-screen on your Android phone, follow these easy steps. How to set up split-screen mode for Android Compatible apps Some of the most popular split-screen compatible apps: Chrome Spotify WhatsApp Twitter Facebook Gmail YouTube Play Store Before you set your heart on any weird combination of apps to split your screen between, it's worth bearing in mind that not all apps support split-screen mode on Android - the likes of Netflix, camera mode and certain games like Candy Crush need to be viewed in full-screen mode. 1. Find compatible apps To figure out which apps you can use in split-screen mode, you need to head to the recently used apps container - you can do this by pressing the square icon to the bottom of the screen, or swiping up on certain phones if you have three-key navigation disabled. This brings up your recently used apps, so you can easily return to something you were doing previously. You'll notice above some of the apps is an icon consisting of two small boxes, one on top the other - this indicates which apps you can use for split-screen mode, so if there's no icon you're out of luck. Netflix has no icon, but Chrome does. Image credit: TechRadar 2. Select the first app from the multi-tasking menu To start split-screen mode on Android, select this icon for the app you want to be on top. When you do the screen will be cut in half, with the app you chose at the top, and the main menu at the bottom. 3. Select your second app from the compatibility list To open a second app, scroll through the list of compatible apps shown in the empty half and tap the one you want to fill that part of the screen. The bar between the apps can be moved, so if you want one to be much smaller than the other just press and hold on the divide and drag it until it's in the perfect position for you. In the left image we've opened one app, in the middle we've opened a second underneath, and in the third we've resized the apps to see more of the text. Image credit: TechRadar How do I turn off split-screen on Android? Turning off split-screen mode is even easier than turning it on. To get rid of one of the apps simply press the black bar between the apps and drag it to the top or bottom of the screen, so the app you want to keep takes up the whole display again. If you want to close both apps, follow the instruction above to close the first one, and then you can close the other how you would any other app, by pressing the home button. What is Android Family Link and how do I use it? Chrome for Android (Image credit: Android Central) Previewing a link in Chrome on Android is a useful feature. When you're browsing the web, you don't necessarily always want to open every link you encounter. This is especially true in research, like, when you want to find the best Android phones. Often when you're looking for something on the web, you won't necessarily find it in the first link you click. Before, you could open a link in a new tab, then close that tab if it wasn't right. Now, by previewing a link in Chrome, you can get a smaller browser window that slides up and loads the page. You can navigate that page and even click deeper links if you want. When you're done, the preview window is easy to dismiss. Plus, this feature is turned on by default so that you can do it now. We'll show you how. Find a link you want to preview and long tap on it. In the menu that comes up, tap Preview page. The new link will open on a page that slides up from the top. You can dismiss that page by sliding it back down from the grab bar or tapping the X. If you want to open that page for real, tap on the box with the arrow in the upper right corner. This will open the page as part of a tab group. Source: Adam Doud/Android Central Previewing a page is handy because it gives you a quick way to make sure the link goes to the page you want. If it does, you can open it up. If it doesn't, it's easy to dismiss. LG may be figuring it out at least 2030. Image: Mackenzie Burke Apple Apple just wrapped up their Fall 2022 event, Far Out, which featured new announcements in the Apple line up including the iPhone 14, Apple Watch Ultra, AirPods Pro 2, and much more. TechRepublic's Clarence Reynolds talks with Tamara Scott and Kaiti Norton to discuss the event and the soon to be released tech. 08:38 Published: September 12, 2022 Modified: September 12, 2022 Read More See all videos Innovation Tom Merritt shares TOP500's ranking of the best supercomputers this year. If you didn't know about this handy feature, we'll show you how to use it. For a long time, if you wanted to make a screen recording of your Android device you needed to use a third-party app. However, Android 11 introduced a native screen recorder tool. This is a much better solution. Note: We'll be demonstrating the screen recorder tool on a Google Pixel phone, but the feature is available on Samsung Galaxy and other Android 11+ devices as well. RELATED: The Best Screen Recording and Broadcasting Software First, we'll need to move the "Screen Record" tile into the Quick Settings—if it's not already. Swipe down twice from the top of your device's screen and tap the pencil icon to edit the tile layout. On a Samsung phone, tap the three-dot menu icon and select "Edit Buttons." The tiles at the top section are in the Quick Settings area (this is flipped on a Samsung phone). Find the "Screen Record" tile, tap and hold, and then drag the tile to the top area. Lift your finger to drop the tile. Tap the back arrow in the top-left corner when you're done. Now we can actually use the screen recorder. First, go to the screen that you want to record, then pull down the Quick Settings again. Tap the "Screen Record" tile. Next, you can decide if you also want to record audio—tap the down arrow to choose between media, microphone, or both—and show your touches on the screen. Tap "Start" when you're ready and you'll see a countdown appear. When you're done recording, swipe down from the top of the screen to show the notifications and tap "Stop" on the screen recorder. That's it! The recording will be saved to the "Movies" or "Screen Recordings" folder on your device. It's very handy to be able to do this without any third-party software. It's nice to see more operating systems getting this as a native feature. RELATED: How to Screen Record on Your Chromebook Technology is a wonderful thing. But sometimes, particularly in the case of young children, it pays to keep an eye on how much influence that technology has on their lives. Recent research (opens in new tab) suggests the need for a better balance of screen time, which is why many companies, including heavy hitters Apple and Google, have introduced numerous ways to monitor how much time you or your loved ones are spending on smartphones. Google's solution is Family Link, which gives you great insights into how your children are using their devices and potentially the content they see on them too. At a basic level, Family Link offers usage controls similar to those that Google added to Android in Android 9.0 Pie. You can set a 'bedtime', limit the time per day spent on the phone, and remotely lock devices when it's time to take a break. If you're a parent with young kids that use Android phones or tablets, we recommend giving Family Link a go, especially if you've struggled with managing multiple family devices in the past. There are two sides to Family Link: an app for the parents' devices and another for the kids'. You can't miss them on Google Play: they're called Family Link for Parents (opens in new tab) and Family Link for Children & Teenagers (opens in new tab). Run the Link for Parents app and follow the setup wizard to create a virtual family structure in your Google account that you can later add your kids to. First, they need Google accounts. An account is needed to sign into an Android phone or tablet anyway, but they can no longer piggy-back off your own login. Once this is set up, log them into the Children & Teenagers Family Link app on their device. The big caveat is that Google Family Link can only exert control over accounts of children aged under 13 (or the applicable age of consent in your country). Once they reach that age, children are given agency over their own accounts. If they want to reject Family Link control, they can. Google says setup the process doesn't take more than 15 minutes, but it will likely take less if you're tech-savvy. After that you can open Android Family Link and find out what your kids are up to. Google Family Link offers lots of controls over your kids' phones. Perhaps the most important, is that you can approve and block application installs from Google Play. If they try to download the PEGI 18-rated Grand Theft Auto: Vice City, for instance, you can put a stop to it. There are two ways to do that. For the hands-off approach, you can simply view all the apps installed on the child's phone and then block any you don't want used. Google says the apps will be blocked within five minutes. If the kid is using the app or game at the time, they get a one-minute warning before they're booted out. That delay has about an 11% chance of avoiding a tantrum. However, this feature is also very useful for young kids that probably shouldn't have access to baked-in Google apps like Chrome just yet. The other approach is more hands-on. In your Google Account settings you can change app approvals so that every download needs to be signed off, including free app and game downloads and in-app purchases. When the kids try to initiate an install, you receive a notification, prompting you to either block or allow the action. Advanced control Android Family Link also shows you how much time your children are spending on their devices and in which apps. You can set a daily limit for screen-on time in an effort to create healthy digital habits before they enter the increasingly regimented school system. Different time limits can be set for different days too, which is handy if you want to be a little more lenient during the weekend, for example. Once the allotted time has run out, the phone locks them out of apps, although they're still able to call you. By setting a 'bedtime', you can also put a hard limit on how late into the night they use their phone. After this the phone locks so they can't carry on using it. Again, they can still call you, which is handy for any sleepover emergencies. Remote control Family Link will probably largely be used for passive monitoring. However, you can also remotely lock the phone. Are they meant to be doing homework? Just head into the Google Family Link app to check they're not browsing games on Google Play or scrolling through Instagram. Family Link also functions as a safety tool, as you can use it to see the phone's location. This uses the GPS of the phone and Google's mapping technology to show you exactly where they are. You can spend serious money on dedicated kid trackers, which also tend to come with monthly costs, but here all the costs are included with your phone bill. Long-term monitoring Family Link radically improves how child- and family-friendly Android phones are. It may be tempting to be a little too heavy-handed, but it gives you the kind of control you might exert over, for example, a games console. You could even use access to new games as positive reinforcement for good behavior. The parents' Family Link app includes 'teacher recommended' educational apps and games and they can be remotely installed on your kids' devices through Family Link. It also lets you monitor your child's phone use over longer periods, with usage stats over the weeks and months. One of the best parts of Family Link is that it doesn't require the Android 9.0 software that introduced similar features as part of its digital wellbeing suite. You can use it with a surprisingly old phone. The parent's phone, the one controlling the show, only needs Android 4.4 KitKat or newer. Google says the child's one ideally needs to run Android 7.0 or newer, but that some with Android 5.0 or 6.0 software will also work.
