The jp2launcher.exe application gets active when a user attempts to make use of java for connecting to remote locations. The application is within java, which is a Sun Microsystems product. It runs in the web browser of a user. How do I run a Jnlp file in Windows command line? jnlp file with verbose tracing, perform the following steps: Enable tracing in the local JRE control panel. Go to Java Control Panel > Advanced > Debugging and select the Enable tracing option. Run the command: /bin/javaws -verbose jnlp file path> - READ: How do you fix a rusted screw?How do I start Jws? Instructions to launch from Application Cache Viewer Go to Start > Settings > Control Panel > Double click on the Java icon. Click on the General tab. Click on the View button from the Temporary Internet Files section. Double click on the respective application from the list that you want to launch. What opens Jnlp? Right-click a JNLP file and click "Open With." Select the "Java Web Start Launcher" application in the list or click "Browse," browse to the "C:\Program Files (x86)\Java\jre\version\bin" folder on your computer and double-click the "Javaws.exe" program file. How do I run a Jnlp file? Double-click JNLP file and click either Change or Open With. Select Java or javaws. Click Enter. Restart your browser, and you should be able to successfully launch the program that utilizes Java. READ: Is the Rose Line real?Why is Jnlp not launching? JNLP file is associated with the Java Web Start program and helps launch applications from a remote desktop client. Misconfigured file type association or missing Java Runtime Environment can lead to JNLP file not opening problems. You can also set the default app for JNLP file type from the Default Apps settings. Is Jnlp deprecated? Oracle has announced that Java Applet and WebStart functionality, including the Applet API, The Java plug-in, the Java Applet Viewer, JNLP and Java Web Start (containing the javaws tool) are all deprecated in JDK 9 and will be removed in a future release. Why are applets obsolete? Applets are going to be obsolete when Java 9 comes out, because Oracle will stop distributing and supporting the Java browser plug-in. READ: What is the best way of finding a good dentist in my area?Is applet deprecated? Applets are deprecated in JDK 9, and this method is only used when running an FX application as an Applet in a browser. Is it better to learn Python or Java? Java and Python, both are widely used programming languages, but Java is better to learn first than Python because of reasons below: Therefore, with Java, there are fewer chances of unexpected runtime errors. As compared to Python, which checks code at runtime, developers might face lots of unexpected errors. Can I create AI using Python? You can check out this blog to build one in a few simple steps! With the python programming language, a script most commonly used by the developers can be used to build your personal AI assistant to perform task designed by the users. A DESCRIPTION OF THE PROBLEM : We have an application deployed via Java Web Start. Once the user wants to open a file via the file open dialog, several error dialogs are displayed, which require the user to click away, to be able to continue. After this the file dialog shows up and work can be continued. Examples are. Dialog title: " jp2launcher.exe" Dialog content: " Das Ziel wurde nicht gefunden" (Target not found) Dialog title: "Fehlende Verknüpfung" (Missing Link) Dialog content: "GfxUIEX.exe wird gesucht. Klicken Sie auf "Durchsuchen" um selbst nach der Datei zu suchen" (Searching for .. Click on "Durchsuchen" to let you search for the file) This article on Reddit claims the cause to be that every .lnk file on user and public Windows desktop is checked by jp2launcher.exe and that broken or non-accessible links trigger the error dialogs. REGRESSION : Last worked in version 8u181 STEPS TO FOLLOW TO REPRODUCE THE PROBLEM : Start a Java Web Start application which uses the file open dialog. E.g. start select "JGoodies Windows", click the "Launch" button, select the "Open" icon (folder icon, 2nd row from above, 4th icon). EXPECTED VERSUS ACTUAL BEHAVIOR : EXPECTED - No error dialogs, just the file open dialog opens. ACTUAL - Before the file open dialog opens, error dialogs pop up. (The nature and number of the messages depends on the individual machine) FREQUENCY : always
