WhatsApp Web is a web-based version of WhatsApp that syncs with your phone's app, allowing users to chat on a bigger screen and focus on work rather than checking messages. Users can scan a QR code with their phones to link WhatsApp Web and chat directly from the computer's browser or download the desktop app for PC access. The process to login or connect WhatsApp app on a smartphone to WhatsApp Web and WhatsApp Desktop app is the same, requiring users to authenticate via QR code. Another way to run WhatsApp on your PCs is by using the WhatsApp Desktop App, which creates a dedicated icon on your taskbar for quick access and offers additional features like voice and video calls, keyboard shortcuts, and faster actions. Logging into the WhatsApp Desktop App is similar to using WhatsApp Web, but one needs to download and install the app from the app stores. To know the devices on which your WhatsApp account is active, users can go to "More" or "Settings" on their smartphone and tap "Linked Devices". While using WhatsApp on your smartphone gives you freedom to communicate on-the-go, using WhatsApp Web or WhatsApp Desktop app offers convenience of faster typing with a bigger keyboard, allowing users to take a break from their smartphones. Due to a server error, it seems like we can't connect to the website right now please try again later or check our system status page for more information. You can control WhatsApp online for both on a single PC by opening WhatsApp Web in two different browsers like Chrome and Opera, or using an incognito window that automatically logs you out after an hour. Features like end-to-end encryption ensure your messages remain secure. To set up screen lock security, navigate to Privacy > App lock, check the box next to App lock, enter a password, and select the duration for automatic screen lock activation. Make a voice or video call on WhatsApp Web, however. It's not currently possible to make a voice or video call on WhatsApp Web. If you're using the desktop app, you can make a video call by clicking the Call tab in the left-hand menu. Open the WhatsApp desktop app. This isn't possible using WhatsApp Web. Click the Call icon in the left-hand menu. At the top of the screen, click the New Call icon. Select the contact or contacts you want to call. Click the Voice or Video buttons to select the type of call you want to make. Alternatively, you can open a specific chat and tap the Video Call or Voice Call icons at the top of the chat window. You'll need to allow the WhatsApp desktop app access to your microphone and webcam in order to make voice and video calls. Should you decide you no longer want to access WhatsApp on your computer, you should take a few steps to unlink your account. This will ensure that your WhatsApp messages are only accessible on your phone again. You can log out from WhatsApp Web or the desktop app directly from your computer, or you can disconnect any linked devices through the WhatsApp mobile app. **###ARTICLE**To access WhatsApp on your computer, follow these steps: Scan a QR code with your laptop's camera and log into WhatsApp Web. Tap OK to clear any instructions displayed. To get started with WhatsApp Web, follow these steps: First, open a browser on your computer and go to web.whatsapp.com. Then, launch WhatsApp on your phone and select Linked devices. Tap on Link a device and scan the QR code displayed on your laptop screen using your smartphone's camera. After scanning the QR code, you'll be logged in to your WhatsApp account, and all your chats will be accessible through the browser. You can send messages, make voice or video calls, and even share documents and files with ease. To pair your iPhone with WhatsApp Web, start by visiting the official WhatsApp website and clicking on "WhatsApp Web." Use the QR scanner that is displayed on your phone to scan it, then open WhatsApp on your iOS device. Next, go to settings and click on WhatsApp Web from the drop-down menu to complete the connection process. Alternatively, you can download the WhatsApp desktop app for a more seamless experience, but ensure your operating system meets the minimum requirements of Windows 8 (or newer) or Mac OS X 10.9 (or newer). The desktop app allows for video calls, voice calls, and access to emoticons and clip symbols in the same positions as on your mobile phone. To log out from the WhatsApp Web, open the messaging app on your phone and go to Menu/Settings to choose log out from all devices. Alternatively, tap the three dots icon at the top of the conversation thread and select the Log out option.
