Common Causes of ULCER

- ✓ Helicobacter pylori
- ✓ Nonsteroidal Anti-inflammatory Drugs
- ✓ Stress
- ✓ Diet
- ✓ Zollinger-Ellison Syndrome

PEPTIC ULCER DISEASE

Definition: The erosion of the GI tract from the digestive action of HCL and pepsin is almost constant in the stomach, but can occur anywhere in the GI tract.

The SYMPTOMS vary a little, depend on where the ulcer is located:

gastric ulcer

BECAUSE THE ULCER IS IN THE STOMACH, PAIN OCCURS RIGHT AFTER EATING (FROM ABOUT 30 MIN TO 1 HOUR) AND DIGESTIVE PROCESSES RESUME AS SOON AS YOU FINISH EATING.

THE PATIENT WILL DESCRIBE THE PAIN AS BURNING, AGRAND AND HEAVY IT OCCURS IN THE EPIGASTRIC AREA (WHERE THE STOMACH IS).

duodenal ulcer

RATHER THAN BEING IRRITATED BY FOOD, A PATIENT WITH A DUODENAL ULCER FEELS PAIN BECAUSE THE FOOD IS NOT CHOWING IN THE STOMACH. THEY WILL THEN START TO HAVE PAIN 1-3 HOURS AFTER EATING.

THEY WILL DESCRIBE BURNING, COMBUSTION PAIN IN THE MIDDLE/LOWER REGION.

DIAGNOSTIC PUD

COPY is the gold standard for PUD diagnosis - A scope is sign the mouth and into the stomach to look for the ulcer site. Many suspicious ulcers end up being treated as ulcers.

BEFORE IF THEY HAVE DYSPLASIA, IT IS VERY WELL NOT TO BE REMOVED. PATIENTS TO THEY DON'T SUFFER - CHECK THE ANTHY.

IF THEY PRODUCE, THE PATIENT SHOULD BE NPO AFTER MIDNIGHT IN THE INTERIM PERIOD PRIOR TO ANY SURGERY.

BREATH TEST is the gold standard diagnosis. IF IT IS POSITIVE, THE PUD IS IN THE STOMACH.

TREATING PUD

PPI's (Proton Pump Inhibitors) are the gold standard for PUD treatment. They are preferred in the long term. They are effective in the long term. They are effective in the long term.

H2 BLOCKERS (Histamine-2 Receptor Antagonists) are also used. They are effective in the long term. They are effective in the long term.

SUCRALFATE (Sucralfate) is also used. It is effective in the long term. It is effective in the long term.

ACIDS (Antacids) are also used. They are effective in the long term. They are effective in the long term.

ANTIBIOTICS are used to treat H. pylori. They are effective in the long term. They are effective in the long term.

MAJOR RISKS → chronic use of NSAIDs or the increased presence of H. pylori.

This is why **patient history** is important. Ask about NSAID use or risk for conditions that may be present (NSAIDs, H. pylori, etc.).

Other **contributing factors** include smoking, alcohol use, caffeine intake, and stress.

Tip: Treat the pH in PUD to use antacids/antacids instead of NSAIDs.

Peptic Ulcer and Helicobacter pylori: A Case Study
01-06-2021
Praveen, Robin Wynn and Barry Kendall

Introduction

Stomach infections with Helicobacter pylori usually occur during childhood. If persistent, these may cause chronic gastritis often leading to peptic ulcer disease, later on in life. (6)

Ulcers are sores or holes in the lining of the stomach or duodenum (the first part of the small intestine). The most common ulcer symptoms is gnawing or burning pain in the abdomen between the navel and the belly button. The pain often occurs when the stomach is empty, between meals and in the early morning hours, but can occur at any other time. It may last from minutes to hours and may be relieved by eating food or taking antacids. Less common symptoms include nausea, vomiting, or loss of appetite. Ulcers may present bleeding, and if bleeding persists, it may lead to iron deficiency anemia and fatigue. In cases of heavy bleeding blood may appear in vomit or bowel movements. (3)

Additionally, H. pylori can be involved in the pathogenesis of gastric cancer such as gastric adenocarcinoma and mucosa-associated lymphoid tissue lymphoma. (8)

Peptic ulcers may lead to bleeding, perforation, emergency situations.

History and Investigation

Ivano-Frankivsk national medical university

Peptic ulcer disease

Vyshyvanyuk Vira Yuriivna

Chair of internal medicine #1 with course of clinical immunology and allergology

Definition

Peptic ulcer disease is chronic polietiologic disease of the stomach or duodenum, the main sign of which is an chronic excoriated segment (ulcer defect) on gastro-intestinal mucosa

PEPTIC ULCER DISEASE (PUD)

Definition

An excavation (hollowed-out area) that forms in the mucosal wall of the stomach, in the pylorus (the opening the stomach and duodenum), in the duodenum (the first part of small intestine), or in the esophagus. Erosion of a circumscribed area of mucous membrane is the cause. This Erosion may extend as deeply as the muscle layers or through the muscle to the peritoneum.

Can pregnancy cause ulcer pain. Peptic ulcer disease in pregnancy icd 10. Can you be pregnant with an ulcer. Peptic ulcer disease in pregnancy pdf. Are stomach ulcers common in pregnancy. Can peptic ulcer affect pregnancy. What happens if you have an ulcer while pregnant.
