How to delete events from calendar on android

How to remove calendar events from android. How to delete events from my calendar.

I just ran at the same problem. I created a local calendar with an app and then removed the app before deleting the calendar. I could reinstall the app and delete the calendar there. So for you as a developer this means that you should probably add this feature to your app. However, if you need a quick solution or if someone else is running in this problem with a third-party app that does not provide a way to remove your calendars, you can use the app (no more free) ICAL Import / Export Caldav App by Lukas Aichauer, as this app allows you to remove any local calendars. Just start it, select "Edit Calendars", then "Choose Calendar" and select the calendar you want to remove. Then click "Delete Calendar" and confirm if you are sure you have selected the right one. Maybe he first uses the same app to pull a backup of the calendars you want to maintain. Edit: in response to Raphadko's comment, I updated the link, the app still exists but is no longer free if you have already created and created a repetitive event and you need to change, modify or delete recurring events in Google Calendar on your Android device, so you should do as follows: 1. Open Google Calendar 2. Touch the event from the series of recurring events 3. The details of that event are shown. Touch the edit button (it's like a pencil) 4. Now choose one of these options: only this event changes, modify all events in the series, edit this and all future events 5. Go to repetition and make necessary changes. Turn it off to eliminate the recurring event. See also: How to add a recurring event in Google Calendar if you have already created and made a repetitive event and you need to change, modify or delete recurring events in Google Calendar on your Android device, ... Tips for your Android 597 can run The backup and restore your data, A € really you don't need to install some backup and restore apps, unless you want ...
