Return to Jane What about confidentiality? Is it safe to send my abstract to Jane? The information sent to the Jane server is not stored. It is kept in memory for as long as needed to calculate the scores and formulate the response page, and then it is discarded from memory. The server itself is protected using standard protection measures. However, we understand that there is still the possibility that someone could intercept the transmission, and of course you do not know whether you can trust us. We therefore included an option in Jane to 'scramble' your input (see the button below the input box). Scrambling simply entails putting all the words in alphabetical order, and this is done by your browser (i.e. no information is sent for the scrambling). We admit that putting the words in alphabetical order does not completely disguise your input, but it does make it extremely hard to read, and it has no effect on the performance of Jane. How does Jane work? Jane first searches for the 50 articles that are most similar to your input\*. For each of these articles, a similarity score between that article and your input is calculated. The similarity scores of all the articles belonging to a certain journal or author are summed to calculate the confidence score for that journal or author. The results are ranked by confidence score. For more information, you can read our paper. \* For the computer geeks: we use the open source search engine Lucene. Queries using keywords are parsed with the QueryParser class, titles and abstracts are parsed using the MoreLikeThis parser class. How often is the data behind Jane updated? We are currently updating the data once every month. Which journals are included in Jane? Basically, all journals included in PubMed are included in Jane. However, in order to show only active journals, we do not show journals for which no entry was found in PubMed in the last year. Which authors are included in Jane? All authors that have published one or more articles in the last 10 years that have been included in PubMed, are included in Jane. Which papers are included in Jane? All records in PubMed have been included that: contained an abstract, were published in the last 10 years, did not belong to one of these categories: comment, editorial, news, historical article, congresses, biography, newspaper article, practice guideline, interview, bibliography, legal cases, lectures, consensus development conference, addresses, clinical conference, patient education handout, directory, technical report, festschrift, retraction of publication, retracted publication, duplicate publication, scientific integrity review, published erratum, periodical index, dictionary, legislation or government publication. What is the Article Influence score? The Article Influence (AI) measures how often articles in the journal are cited within the first five years after its publication. These citations are weighted based the influence of the journals from which citations are received: being cited in an article in Science can boost a journal's AI more than being cited in an article in an obscure journal. For more detailed information, see the eigenfactor.org website. I would like to include Jane in my application. Is it possible to access Jane programmatically? Yes, there is an API that is freely available. A brief description can be found here. Contact If you still have unanswered questions, or would like to make a remark regarding Jane, you can always send an e-mail to . Return to Jane The Article Influence (AI) measures how often articles in the journal are cited within the first five years after its publication. These citations are weighted based the influence of the journals from which citations are received: being cited in an article in Science can boost a journal's AI more than being cited in an article in an obscure journal. Insert your title and/or abstract here: (or, click here to search using keywords) Have you recently written a paper, but you're not sure to which journal you should submit it? Or maybe you want to find relevant articles to cite in your paper? Or are you an editor, and do you need to find reviewers for a particular paper? Jane can help! Just enter the title and/or abstract of the paper in the box, and click on 'Find journals', 'Find authors' or 'Find Articles'. Jane will then compare your document to millions of documents in PubMed to find the best matching journals, authors or articles. Keyword search Instead of using a title or abstract, you can also search using a keyword search, similar to popular web search engines. Click here to search using keywords. Beware of predatory journals JANE relies on the data in PubMed, which can contain papers from predatory journals, and therefore these journals can appear in JANE's results. To help identify high-quality journals, JANE now tags journals that are currently indexed in MEDLINE, and open access journals approved by the Directory of Open Access Journals (DOAJ).
