Regardless of whether you're singing, karaoke or MCing, our DJ City product selection is ideal and we have the wireless headset microphone to fulfill your needs. A wireless microphone is a type of microphone that does not require a physical connection to the audio system. Instead of being connected with cables, it uses wireless technology to transmit audio signals to a receiver, which then connects to the audio system. This allows performers, such as musicians, presenters, and public speakers, to have the freedom of movement on stage without being restricted by cables. Wireless microphones are extremely popular among performers who want to move around freely during their performances. They offer convenience and flexibility, as there are no cables to trip over or restrict movement. At Coleman's Music Store in Melbourne CBD, you can find a wide range of wireless microphones from top brands such as BEHRINGER, RODE, and SHURE. Whether you're in Sydney, Brisbane, Canberra, Adelaide, Hobart or anywhere in Australia, you can also conveniently buy wireless microphones online from Coleman's Music Store. Are wireless microphones good? Wireless microphones are a great choice for performers seeking freedom and flexibility on stage. With brands like BEHRINGER, RODE, and SHURE, Coleman's Music Store Melbourne CBD provides a wide range of wireless microphone options that deliver exceptional sound quality and reliable performance. One of the primary advantages of wireless microphones is their superior sound quality. They ensure crystal-clear audio, allowing performers to captivate their audience with every note. Additionally, wireless microphones offer increased reliability, eliminating the risk of cable interference or accidental tripping during performances. Versatility is another key feature of wireless microphones. They enable performers to move around freely, enhancing their stage presence and interaction with the audience. With built-in features like noise-free bandwidth diversity, these modern microphones minimise the chances of signal dropouts, ensuring uninterrupted performances. It is worth noting that wireless microphones authorised for use in Australia do not require a license. However, they must comply with the conditions outlined in the LIPD class licence. Whether you are in Melbourne, Sydney, Brisbane, Canberra, Adelaide, Hobart, or anywhere in Australia, you can buy wireless microphones from Coleman's Music Store online. Experience the advantages of wireless microphones, such as their exceptional sound quality, reliability, and versatility, by exploring the range of products available at Coleman's Music Store. What famous artists use Wireless Mics? Wireless microphones have become a common tool for professional musicians and performers worldwide, and many famous artists rely on them to deliver unforgettable performances. These artists have achieved remarkable success in the music industry, and their choice to use wireless mics further emphasises the significance of this technology. One well-known artist who utilises wireless mics is Beyoncé. With her powerful vocals and energetic stage presence, Beyoncé captures the hearts of millions of fans worldwide. She relies on the reliability and freedom of movement offered by wireless microphones to deliver her dynamic performances. Another artist who has embraced wireless mics is Bruce Springsteen. Known for his electrifying live shows and passionate delivery, Springsteen uses wireless mics to connect with his audience. This technology allows him to roam freely on stage without compromising on sound quality. The Australian-born singer and songwriter Sia is also known to use wireless mics during her captivating performances. Renowned for her unique vocal range and emotive performances, Sia's choice of wireless mics ensures that her captivating voice reaches every corner of the venue. These are just a few examples of famous artists who rely on wireless microphones to enhance their stage presence and engage their audience. What is the wireless microphone frequency in Australia? The wireless microphone frequency range in Australia operates within the UHF spectrum. The specific frequency range used for wireless microphones in Australia is from 520 to 694 MHz. It is important for users of wireless microphones to be aware of the rules and regulations set in place by the Australian Communications and Media Authority (ACMA). In Australia, wireless microphones operate under a Low Interference Potential Devices (LIPD) class licence. This means that users do not require an individual licence to operate wireless microphones within the designated frequency range. However, there are certain rules that must be followed to ensure proper usage. One of the key rules is to avoid frequencies that are used by existing licensed services, such as television broadcasters. The ACMA provides information on unused frequencies in each area through their "MySwitch" website, which users can refer to when selecting frequencies for their wireless microphones. What are the Wireless Microphone types and features? When it comes to wireless microphones in Australia, there are a few different types available, each with its own set of features. Whether you're performing on stage, delivering a presentation, or recording vocals, there's a wireless microphone that suits your needs. One popular type is the handheld microphone, which offers a convenient and versatile solution. Brands like BEHRINGER, RODE, and SHURE offer handheld microphones that deliver excellent sound quality and often feature built-in mute switches and easy-to-use controls. Another option is the bodypack transmitter, which is commonly used in applications like theatre productions and public speaking engagements. These transmitters can be used with various microphone types, such as head-set microphones or lapel microphones, offering hands-free operation and flexibility. Wireless microphones in Australia operate under a Low Interference Potential Devices (LIPD) class licence. While users do not require an individual licence, it's important to follow the rules set by the ACMA. Users should avoid frequencies used by licensed services, like TV broadcasters, to prevent interference. The ACMA's "MySwitch" website provides information on unused frequencies to help users select the appropriate frequency for their wireless microphones. Is it worth buying an expensive Wireless Mic? When considering whether to invest in an expensive wireless microphone, there are several factors to consider. One of the most important factors is sound quality. Expensive wireless mics often use advanced technology and high-quality components that result in clearer and more accurate sound reproduction. This can make a significant difference in live performances and studio recordings, allowing for a more professional and polished sound. Durability is another crucial factor. Expensive wireless microphones are typically built to withstand the rigours of professional use, with robust construction and high-quality materials. This ensures that the microphone can endure frequent performances and handle any unexpected mishaps without compromising its performance. Furthermore, expensive wireless microphones often come with built-in features that enhance their functionality. One such feature is noise-free bandwidth diversity, which allows the microphone to automatically switch to a clear and interference-free frequency, ensuring a seamless performance even in crowded wireless environments. It is also worth noting that top artists often prefer using expensive wireless mics for their live performances and studio recordings. These artists recognise the importance of investing in high-quality equipment to achieve the best sound possible.
