

Save webpage as pdf chrome

Continue

how the page is designed, this may include all corresponding code, as well as image files. Go to a web page in Chrome and follow these steps: Select the Menu icon (three vertical dots) > More Tools > Save Page As. In Save File dialogue box, change name of page if desired, and choose where to save it > Save.Shortcuts: Ctrl+S in Chrome OS and Windows. Command+S in macOS.This article explains how to save a web page in Google Chrome. Depending on how the page is designed, this may include all corresponding code, as well as image files. Go to a web page in Chrome and follow these steps: Select the Menu icon (three vertical dots). When the dropdown menu appears, hover your pointer over the More tools option to open a submenu, and then select Save Page As. A Save File dialog box will appear. Its appearance varies depending on your operating system. Next to Save As, change the web page's name if you don't want to use the one that appears in the name field. Select where you want to save the web page and its accompanying files, and then select Save. If you navigate to the folder where you saved the file, you'll see an HTML file of the web page and, in many cases, an accompanying folder that contains code, plug-ins, and other resources used in the creation of the web page. To save time, try using a Chrome keyboard shortcut to save a web page. Depending on your platform, you may be able to specify HTML only or Complete, which downloads the supporting files. If you choose the Complete option, you may see more supporting files than the ones that are downloaded when you use the Menu icon. Here are the shortcuts for saving a web page in Chrome: For Chrome OS and Windows, use Ctrl+S.For macOS, use Command+S. Select the destination and format in the window that opens to save the file to your computer. Thanks for letting us know! Get the Latest Tech News Delivered Every Day Subscribe Tell us why! Google Chrome lets you download full web pages for offline viewing. You can save just the basic HTML or additional assets (like pictures) to completely re-assemble a page without the need for an internet connection. How to Save a Web Page Go ahead and fire up Chrome, and then navigate to a web page that you want to save. Click the menu button, and then click on More Tools > Save Page As. Alternatively, you can use Ctrl+S (Command+S in macOS) to open the "Save as..." dialog. Choose a folder to save the page and then, from the drop-down menu, choose either "Webpage, HTML only" or "Webpage, Complete." The former keeps only content vital to access it later on (text and formatting), while the latter saves everything (text, images, and additional resource files). If you want to be able to access the full page offline, choose the "complete" option. The web page is downloaded the same as any other file, with its progress at the bottom of Chrome's window. To open the web page, head to the folder and then double-click the file to open it. After you finish with the web page, you can safely delete it from your computer. How to Create a Shortcut for Web Pages While saving a page for offline viewing is great for articles you might want to reference later, you can also make quick links to specific websites directly on your desktop, which is better for when you are online. This works well for web apps that you use regularly—you can even set them up to run in full windows, so they feel almost native. A shortcut to a web page is the same as any other shortcut already on your desktop. The main difference between creating a shortcut and saving a page is you would use a shortcut for pages you regularly visit—like hwtogeeek.com—not a specific article or static page you want to preserve for offline viewing. If you're just trying to save a page for quick access, then you'll want to create a shortcut on your desktop instead. Fire up Chrome and navigate to the site you want to save to your computer's Desktop. Click on the menu > More Tools > Create Shortcut. Give the shortcut a custom name if you want. You can also tick the "Open as window" box to open the site in a separate window instead of the Chrome browser. This will force the page to open in a new window without tabs, the Omnibox, or bookmarks bar. It's great for web apps because it gives them a very native, app-like feel. Click "Create." After you click "Create," a new icon is added to your desktop. Double-click on the icon to instantly go to your favorite site. If you try to access a shortcut while you're offline, you'll receive an error, and the page won't load. The reason this happens is that instead of saving all the HTML, text, and images—like in the previous part—a shortcut points Chrome to a specific web page that it then has to load. If you no longer use these shortcuts to access the websites anymore, simply delete the file from your desktop to free up any clutter on your workspace. Save a complete web page (as currently displayed) as a single HTML file that can be opened in any browser.CHANGES Version 27.5
• Minor bug fix.OVERVIEW Save Page WE provides a simple facility to save a web page (as currently displayed) as a single HTML file that can be opened in any browser. The saved page is a highly accurate representation of the original page. Multiple pages can be saved either by selecting multiple tabs or by loading a list of page URLs. Save Page WE is implemented using the WebExtensions API and is available for both Firefox and Chrome with identical functions and user interfaces. If used with Print Edit WE, Save Page WE now requires Print Edit WE 26.1 or later for full compatibility. OPTIONS PAGE The Save Page WE Options page can be accessed as follows:
• Firefox - Right-click on the toolbar button, select Manage Extension, click on the *** button and select Options.
• Chrome - Right-click on the toolbar button, and then select Options. TOOLBAR BUTTON After installation of Save Page WE, there will be a new blue 'floppy-disk' button on the main toolbar. To save the web pages in all of the currently selected tabs file, just click on the Save Page WE toolbar button. There are options to set the button action as:
• Save Selected Tabs (Basic, Standard or Custom Items)
• Save Listed URLs (Basic, Standard or Custom Items) There is an option to prompt the user to enter comments when saving the file. There is an option to use the new save method, which can save more pages (see the 'Save Methods' section below). There is an option to always show the 'Save As' dialog box when saving a page using the new save method. If this option is not enabled, the 'Save As' dialog box will only be shown if the Firefox 'Downloads' option is set to 'Always ask you where to save files'. There is an option to delay the start of saving until several seconds after the initial page load event, which can be useful with pages that display delayed search results. There is an option to close the tab after saving a page. There are options to specify the format of the saved file name. See the 'Saved File Name' section below. By default the saved HTML file will have a '.html' extension. CONTEXT MENU & BUTTON MENU To save a web page as an HTML file, or to perform operations on a previously saved page, right-click on the page contents to open the context menu, select the 'Save Page WE' sub-menu, and then select one of the menu items:
• Save Selected Tabs
- Basic, Standard or Custom Items
- Basic, Standard or Custom Items with or without Scroll/Shrink
• Save Listed URLs
- Basic, Standard or Custom Items
- Basic, Standard or Custom Items with or without Scroll/Shrink
• Cancel Save
• View Saved Page Info
• Remove Resource Loader
• Extract Image/Audio/Video Alternatively, right-click on the Save Page WE toolbar button to open the button menu, and then select one of the menu items. There is an option to show/hide the Save Page WE sub-menu item on the context menu. Note, the 'Remove Resource Loader' menu item is only shown when viewing a page saved by Save Page WE 15.1 or earlier. Note, the 'Extract Image/Audio/Video' menu item is only shown on the context menu when right-clicking on images in saved pages. KEYBOARD SHORTCUTS To save a web page as an HTML file, press Alt+A. To cancel a single or multiple page save, press Alt+C. These shortcuts can be reconfigured in the Shortcuts tab of the Save Page WE Options page. SAVING MULTIPLE PAGES There are two ways to save multiple pages:
• Highlight multiple tabs and then select the 'Save Selected Tabs' menu item.
• Load a file containing a list of URLs in the Zoom Page WE Options dialog and then select the 'Save Listed URLs' menu item. When saving multiple pages, tabs are switched to foreground if the load lazy content option is enabled. SAVED ITEMS Save Basic Items - saves these items:
• HTML elements
• HTML image files (currently displayed)
• HTML canvas graphics
• CSS style sheets
• CSS image files (currently displayed)
• CSS font files (used by this browser) Save Standard Items - saves the Basic Items and these items:
• HTML image files (all)
• HTML audio & video files
• HTML object & embed files
• CSS font files (woff for any browser) Save Custom Items - saves the Basic Items and the items selected from this list:
• HTML image files (all)
• HTML audio & video files
• HTML object & embed files
• CSS image files (all)
• CSS font files (woff for any browser)
• CSS font files (all)
• Scripts (in same-origin frames) Note, scripts in cross-origin frames are never saved. There is an option to load lazy content using two alternative methods: Scroll Page or Shrink Page. There is an option to load lazy images in existing content. There is an option to retain cross-origin frames when saving the page. Note, cross-origin iframes often contain adverts or visitor comments. There is an option to merge duplicate CSS images (to reduce the saved file size). There is an option to allow saved scripts to execute (by default scripts are not allowed to execute). There are options to remove or rehide elements hidden by the page itself or by other extensions, such as page editors (e.g Print Edit WE) or content blockers (e.g. uBlock Origin). There is an option to include an information bar at the top of the saved page. There is an option to include metrics and resource summary in the saved file. There is an option to set the maximum depth of saved nested frames/iframes. SAVED FILE NAME There is an option to specify the format of the saved file name. This format is used when saving the complete page and when extracting a resource (Image/Audio/Video). The saved file name may contain the following predefined fields:
• %TITLE% - (saving page) the document title, or if missing same as %FILE%.
• %TITLE% - (extracting resource) the same as %FILE%.
• %DATE(x)% - saved date in YYYYMMxDD format. 'x' is optional separator.
• %TIME(x)% - saved time in HHxMMxSS format. 'x' is optional separator.
• %DATEP(x)% - same as %DATEP(x)%, or if missing falls back to saved date.
• %TIMEP(x)% - same as %TIMEP(x)%, or if missing falls back to saved time.
• %HOST% - host name in URL.
• %HOSTW% - same as %HOST%, but without 'www.' prefix.
• %PATH% - path name in URL.
• %PATHW% - same as %PATH%, but without '.extension' suffix.
• %FILE% - file name in the last segment of URL path.
• %FILEW% - same as %FILE%, but without '.extension' suffix.
• %QUERY(y)% - query string in URL if 'p' omitted, else value of parameter 'p'.
• %FRAGMENT% - fragment string in URL. There are options to replace spaces in the saved file name with a user-defined character and to set the maximum length of the saved file name. SAVE METHODS Below are some important details about the new and old save methods. Old Save Method:
• The default in Version 18.0 or earlier.
• Remembers the last save location in both Firefox and Chrome.
• Cannot save a few pages (e.g Yahoo) in Chrome 84 or later.
• In which case the save will fail without any error messages.
• Use the new save method for these pages. New Save Method:
• The default in Version 19.0. Optional in Version 20.0 or later.
• Remembers the last save location in Firefox 76 or later, but not in Chrome.
• Can save all pages.
• Other download extensions may change the saved file name to a UUID.
• For example "9bd65c06-511c-491c-b611-63d596f38b9e.html".
• In which case try uninstalling and reinstalling Save Page WE.
• Or use the old save method. CONFIGURING FIREFOX Go to Firefox Main Menu > Tools > Options > General. In the Applications section, set the action for the 'Firefox HTML Document' content type:
• Always ask - the 'What should Firefox do with this file?' dialog box will be shown.
• Use Firefox - the saved file will be opened by Firefox.
• Save File - the action depends on the settings in the Downloads section. In the Downloads section, set the 'Save files to' folder location, and enable or disable the 'Always ask you where to save files' option. LOADING RESOURCES There is an option to set the maximum time allowed for loading a Listed URL. There is an option to set the maximum size allowed for large or repeatedly referenced resources. There is an option to set the maximum time allowed for loading individual resources. There is an option to allow loading of passive mixed content (image,audio,video). There is an option to send a referer header when requesting a resource. The options are: do not send a refer header, send a referer header with origin only, or send a referer header with origin and path (origin only in private browsing). UNSAVED RESOURCES There is an option to show a warning if any resources cannot be saved. There is an option to show a list of all resources that cannot be saved. There is an option to remove URLs of unsaved resources, which avoids unsaved resources being loaded from the internet when the saved page is opened. USING AUTOMATION There is an option to use automation mode, allowing a page to be saved from the command line. If this option is enabled:
• When Firefox starts, Save Page WE will be automatically initiated using the current Button Action.
• When the save operation is complete, Firefox will be automatically closed. To exit automation mode, immediately after Firefox starts up, use the 'Cancel Save' menu command or keyboard shortcut to cancel the save operation, and then disable the option to use automation. If the Button Action is set to Save Selected Tabs, then all tabs are saved when the use automation option is enabled. The new saved method is always used when the use automation option is enabled. SAVED FILE FORMAT The HTML elements (as currently displayed) and all of the referenced resources are saved in a single file (.html). External CSS style sheets are converted to internal CSS style sheets. Frame contents and external scripts are stored as UTF-8 data URLs in the 'src' attribute. Iframe contents are stored as UTF-8 text in the 'srcdoc' attribute. All binary resources (images, fonts, audios, videos, etc) are stored as Base64 data URIs. CSS images referenced multiple times within a frame will only be stored once in that frame. CSS fonts and HTML images/audios/videos will be stored once for each reference. Note that not all cross-origin frames can be saved. A cross-origin frame will be saved only if all of its cross-origin ancestor frames can run content scripts. Scripts in cross-origin frames are not saved. There is an option to format the HTML source code in the saved file. CONVERSION OF MAF AND UNMHT FILES (.maff & .mht) It is not possible for Save Page WE to do an automatic conversion of a Mozilla Archive Format (.maff or .mht) file or an UnMHT (.mht) file into a Save Page WE (.html) file. Firefox WebExtensions add-ons, such as Save Page WE, are not allowed to read local files. It is recommended to convert .maff/.mht files as follows:
• Open the saved .maff/.mht file in Firefox.
• Re-save as .htm file (+ resources folder) using Firefox's "Save Page As..." (Web Page, complete).
• Serve the saved .htm file (+ resources folder) through a local web server and open in Firefox.
• Re-save using Save Page WE. With regards to a local web server, it is suggested using a Google Chrome App called "Web Server for Chrome" available from the Chrome Web Store: Note that, using Firefox 56 and Mozilla Archive Format 5.2.0, it is possible to do a bulk conversion of .maff/.mht files to .htm files (+ resources folders), as described here: .
